Solar Rights Laws

Florida law forbids ordinances, deed restrictions, covenants or similar binding agreements from prohibiting solar equipment use. Under this law, a homeowner may not be denied permission to install a solar collector, clothesline, or other energy device based on renewable resources by "any entity granted the power or right in any deed restriction, covenant or similar binding agreement to approve, forbid, control, or direct alteration of property..."

While a homeowner cannot be prevented from installing a solar energy system, certain restrictions may be imposed without violating the law.

However, those restrictions must be reasonable, not arbitrary, and uniformly imposed on homeowners in the subdivision. The restrictions cannot act to impair the performance of a solar system or it may be seen as "effectively" prohibiting solar.

The law specifically prohibits a community association from preventing the installation of solar collectors on the roof. The association may determine where on the roof the collectors may be installed, so long as the installation is within the area required for its effective operation, that is, south, or east or west of due south. The association is, thereby, limited in imposing requirements which would effectively restrict the system's operating efficiency or increase the installation cost. As such, requirements for screening the system from view, whether by trees or fences, ground-mounting, or limiting visibility from the street, are contrary to the spirit and letter of the law if the result impairs the efficiency of the system.

There has been some litigation with respect to the applicability of Section 163.04. However, most cases have been resolved through mediation. One such case involved the installation of a solar pool heater on the roof of a home. In this case, the association filed an injunction requesting removal of the rooftop system and instead required that the system be ground-mounted. This change would have impaired the system's operating efficiency; and the yard space was insufficient to allow ground mounting. The parties settled, with the homeowner's prevailing on the issue of roof mounting.

Although the collectors were relocated to a less conspicuous area on the roof, more panels were added to compensate for the loss of system efficiency.

Another case dealt with the denial of a residential pool heating system. This case was decided in favor of the association based on the sole issue of whether Section 163.04 applied to homeowner associations. The court held that the law did not apply to homeowner associations. Subsequently, the law was amended to specifically include actions taken by homeowner associations.

More recently, there have been cases decided under 163.04 that have protected the right of homeowners to install tubular skylights on their residences, including condominiums and townhome villas where the devices were installed on common property. In both cases, the homeowners prevailed and the association was required to pay court costs and attorney fees – for themselves and for the prevailing homeowner.

The Legislature has made successive amendments to the statute to better state its intent to protect the right of all Floridians to use solar energy to reduce the cost of operating their homes, while at the same time reducing the state's dependence on fossil fuels. The law applies to all actions taken with respect to approval or denial of a solar system, regardless of when the community was instituted or when the association bylaws may have been adopted.

It is important to seek the approval of a homeowners association prior to the installation of a solar system. Section 163.04 does not waive the need for association approval if it is required by the governing documents.

Solar Rights Laws

(Continued)

Florida Statute - Section 163.04

Energy devices based on renewable resources—

- (1) Notwithstanding any provision of this chapter or other provision of general or special law, the adoption of an ordinance by a governing body, as those terms are defined in this chapter, which prohibits or has the effect of prohibiting the installation of solar collectors, clotheslines, or other energy devices based on renewable resources is expressly prohibited.
- (2) No deed restrictions, covenants, or similar binding agreements running with the land shall prohibit or have the effect of prohibiting solar collectors, clotheslines, or other energy devices based on renewable resources from being installed on buildings erected on the lots or parcels covered by the deed restrictions, covenants, or binding agreements. A property owner may not be denied permission to install solar collectors or other energy devices based on renewable resources by any entity granted the power or right in any deed restriction, covenant, or similar binding agreement to approve, forbid, control, or direct alteration of property with respect to residential dwellings not exceeding three stories in height. For purposes of this subsection, such entity may determine the specific location where solar collectors may be installed on the roof within an orientation to the south or within 45° east or west of due south provided that such determination does not impair the effective operation of the solar collectors.
- (3) In any litigation arising under the provisions of this section, the prevailing party shall be entitled to costs and reasonable attorney's fees.
- (4) The legislative intent in enacting these provisions is to protect the public health, safety, and welfare by encouraging the development and use of renewable resources in order to conserve and protect the value of land, buildings, and resources by preventing the adoption of measures which will have the ultimate effect, however unintended, of driving the costs of owning and operating commercial or residential property beyond the capacity of private owners to maintain. This section shall not apply to patio railings in condominiums, cooperatives, or apartments.

History—s. 8, ch. 80-163; s. 1, ch. 92-89; s. 14, ch. 93-249.
